

## ActiveQR™ Quasi-Resonant PWM Controller

### FEATURES

- Quasi-Resonant Operation
- Adjustable up to 75kHz Switching Frequency
- Accurate OCP/OLP Protection
- Integrated Patented Frequency Foldback Technique
- Integrated Patented Line and Primary Inductance Compensation
- Built-in Soft-Start Circuit
- Line Under-Voltage, Thermal, Output Over-voltage, Output Short Protections
- Current Sense Resistor Short Protection
- Transformer Winding Short Protection
- 100mW Standby Power
- Complies with Global Energy Efficiency and CEC Average Efficiency Standards
- Tiny SOT23-6 Packages

### APPLICATIONS

- AC/DC Adaptors/Chargers for Cell Phones, Cordless Phone, PDAs, E-books
- Adaptors for Portable Media Player, DSCs, Set-top boxes, DVD players, records
- Linear Adapter Replacements

### GENERAL DESCRIPTION

The ACT511 is a high performance peak current mode PWM controller. ACT511 applies *ActiveQR™* and frequency foldback technique to reduce EMI and improve efficiency. ACT511's maximum switching frequency is set at 90kHz. Very low standby power, good dynamic response and accurate voltage regulation is achieved with an opto-coupler and the secondary side control circuit.

The burst mode operation enables low standby power of 100mW with small output voltage ripple. By applying frequency foldback and *ActiveQR™* technology, ACT511 increases the average system efficiency compared to conventional solutions and exceeds the latest ES2.0 efficiency standard with

good margin.

ACT511 integrates comprehensive protection. In case of over temperature, over voltage, winding short, current sense resistor short, open loop and overload conditions, it would enter into auto restart mode including Cycle-by-Cycle current limiting.

ACT511 is to achieve no overshoot and very short rise time even with a big capacitive load (4000µF) with the built-in fast and soft start process.

The Quasi-Resonant (QR) operation mode can improve efficiency, reduce EMI and further reduce the components in input filter.

ACT511 is ideal for applications up to 60 Watts.

## PIN DESCRIPTIONS

PIN	NAME	DESCRIPTION
1	CS	Current Sense Pin. Connect an external resistor ( $R_{CS}$ ) between this pin and ground to set peak current limit for the primary switch.
2	GND	Ground.
3	GATE	Gate Drive. Gate driver for the external MOSFET transistor.
4	VDD	Power Supply. This pin provides bias power for the IC during startup and steady state operation.
5	VDET	Valley Detector Pin. Connect this pin to a resistor divider network from the auxiliary winding to detect zero-crossing points for valley turn on operation.
6	FB	Feedback Pin. Connect this pin to optocouplers's collector for output regulation.
