

21V, 1.8A, 600KHz Synchronous Step-Down DC/DC Converter

Description

The FR9801 is a synchronous step-down DC/DC converter that provides wide 4.5V to 21V input voltage range and 1.8A continuous load current capability.

The FR9801 fault protection includes cycle-by-cycle current limit, UVLO, output overvoltage protection and thermal shutdown. The adjustable soft-start function prevents inrush current at turn-on. This device uses current mode control scheme which provides fast transient response. Internal Compensation function reduces external compensation components and simplifies the design process. In shutdown mode, the supply current is less than 1µA.

The FR9801 is available in a SOT-23-6 package, provides good thermal conductance.

Functional Pin Description

I/O	Pin Name	Pin No.	Pin Function
I	FB	3	Voltage Feedback Input Pin. Connect FB and V_{OUT} with a resistive voltage divider. This IC senses feedback voltage via FB and regulates it at 0.8V.
I	VIN	5	Power Supply Input Pin. Drive VIN pin by 4.5V to 21V voltage to power on the chip.
I	$\overline{\text{SHDN}}$	4	Enable Input Pin. This pin is a digital control input that turns the converter on or off. Connect to VIN with a 100KΩ resistor for self-startup.
I	GND	2	Ground Pin.
O	LX	6	Power Switching Output. LX is the output of the internal high side NMOS switch.
O	BST	1	High Side Gate Drive Boost Pin. A 10nF or greater capacitor must be connected from this pin to LX. It can boost the gate drive to fully turn on the internal high side NMOS.
