Service Manual

1. Precautions and notices

BEFORE SERVICING THE LCD TV, READ THE SAFETY PRECAUTIONS IN THIS MANUAL.

USE ONLY MANUFACTURER SPECIFIED REPLACEMENT PARTS WHEN SERVICING.

USE OF NON-AUTHORIZED PARTS WILL VOID THE MANUFACTURE'S WARRANTY

Proper service and repair is important to the safe, reliable operation of all Hisense Electric Co., Ltd Equipment. The service procedures recommended by Hisense and described in this Service Guide are effective methods of performing service operations. Some of these service operations require the use of tools specially designed for the purpose. The special tools should be used when and as recommended.

It is important to note that this manual contains various CAUTIONS and NOTICES which should be carefully read in order to minimize the risk of personal injury to service personnel. The possibility exists that improper service methods may damage the equipment and pose risk of personal injury

. It is also important to understand that these CAUTIONS and NOTICES ARE NOT EXHAUSTIVE. Service should only be performed by an experienced electronics

technician trained in the proper Television safety and service methods and procedures

Hereafter throughout this manual, Hisense Electric Co., Ltd will be referred to as

Hisense.

1.1 Warning

1.1.1

Critical components having special safety characteristics are identified with a ▲ by the Ref. No. in the parts list. Use of non-manufacturer's recommended parts may create shock, fire, or other hazards. Under no circumstances should the original design be modified or altered without written permission from Hisense. Hisense assumes no liability, express or implied, arising out of any unauthorized modification of design. Servicetech assumes all liability.

DANGER CAUTION

TO ENSURE THE CONTINUED RELIABILITY OF THIS PRODUCT, USE ONLY ORIGINAL MANUFACTURER'S REPLACEMENT PARTS, WHICH ARE LISTED WITH THEIR PART NUMBERS IN THE PARTS LIST SECTION OF THIS SERVICE GUIDE.

1.1.2.

All ICs and many other semiconductors are susceptible to electrostatic discharges (ESD). Careless handling during repair can reduce life drastically. When repairing, be sure to use anti-static table mats and properly use a grounding wrist strap. Keep components and tools also at this same potential.

IMPORTANT:

Always disconnect the power cord from AC outlet before replacing parts or modules.

1.1.3

To prevent electrical shock, use only a properly grounded 3 prong outlet or extension cord.

1.1.4

When replacement parts are required, be sure to use replacement parts specified by the manufacturer or have the same characteristics as the original part. Unauthorized substitutions may result in fire, electric shock, or other hazards and will void the manufacturer's warranty.

1.1.5

Safety regulations require that after a repair the set must be returned in its original condition. In addition, prior to closing set, check that:

-Note:

>All wire harnesses and flex cables are properly routed and secured with factory tape and/or mounted cable clamps.

> All cables and connectors are properly insulated and do not have any bare wires/lead exposed.

1.1.6

(1) Do not supply a voltage higher than that specified to this product. This may damage the product and may cause a fire.

(2) Do not use this product:

- > High humidity areas
- > In an area where any water could enter or splash into the unit.

High humidity and water could damage the product and cause fire.

(3) If a foreign substance (such as water, metal, or liquid) gets inside the panel module, immediately turn off the power. Continuing to use the product may cause fire or electric shock.

(4) If the product emits smoke, and abnormal smell, or makes an abnormal sound, immediately turn off the power. Continuing to use the product, it may cause fire or electric shock.

(5) Do not pull out or insert the power cable from/to an outlet with wet hands. It may cause electric shock.

(6) Do not damage or modify the power cable. It may cause fire or electric shock.

(7) If the power cable is damaged, or if the connector is loose, do not use the product: otherwise, this can lead to fire or electric shock.

(8) If the power connector or the connector of the power cable becomes dirty or dusty, wipe it with a dry cloth. Otherwise, this can lead to fire.

(9) Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over.

1.2 Notes

Notes on Safe Handling of the LCD panel and during service

The work procedures shown with the Note indication are important for ensuring the safety of the product and the servicing work. Be sure to follow these instructions.

- Before starting the work, secure a sufficient working space.
- At all times other than when adjusting and checking the product, be sure to turn OFF the POWER Button and disconnect the power cable from the power source of the TV during servicing.
- To prevent electric shock and breakage of PC board, start the servicing work at least 30 seconds after the main power has been turned off. Especially when installing and removing the power board, start servicing at least 2 minutes after the main power has been turned off.
- While the main power is on, do not touch any parts or circuits other than the ones specified. If any connection other than the one specified is made between the measuring equipment and the high voltage power supply block, it can result in electric shock or may trip the main circuit breaker. When installing the LCD module in, and removing it from the packing carton, be sure to have at least two persons perform the work.
- When the surface of the panel comes into contact with the cushioning materials, be sure to confirm that there is no foreign matter on top of the cushioning materials before the surface of the panel comes into contact with the cushioning materials. Failure to observe this precaution may result in, the surface of the panel being scratched by foreign

matter.

- Be sure to handle the circuit board by holding the large parts as the heat sink or transformer. Failure to observe this precaution may result in the occurrence of an abnormality in the soldered areas.
- Do not stack the circuit boards. Failure to observe this precaution may result in problems resulting from scratches on the parts, the deformation of parts, and short-circuits due to residual electric charge.
- Perform a safety check when servicing is completed. Verify that the peripherals of the serviced points have not undergone any deterioration during servicing. Also verify that the screws, parts and cables removed for servicing purposes have all been returned to their proper locations in accordance with the original setup.

The lightning flash with arrowhead symbol, within an equilateral triangle is intended to alert the user to the presence of uninsulated dangerous voltage within the products enclosure that may be of sufficient magnitude to constitute a risk of electric shock.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the set.

2. Product Function Specifications

Product Function

Specifications

Model Name		LEDN24K15PUK	LEDN32K15UK
Dimension (W×H×D)(mm)	Without stand	564×370×44	772.3×495×46.5
	With stand	564×471×207	772.3×560.2×220.6
Weight(kg)	Without stand	4.4	8.7
	With stand	4.6	9.2
LCD Panel Minimum size(diagonal)		60	81
Screen† resolution		1920×1080	1366×768
Power consumption		Refer to rating label	
Audio power		2W+2W	8W+8W
Power supply		Refer to rating label	
Receiving systems	RF	PAL, SECAM, B/G/D/K/L/L'	
	AV	PAL, SECAM, NTSC	
Component Input		480I、480P、576I、576P 720P/50Hz、720P/60Hz、1080I/50Hz、1080I/60Hz	
VGA Input		VGA (640×480 60Hz) 、 SVGA (800×600 60Hz) XGA (1024×768 60Hz)	
HDMI Input		RGB/60Hz (640×480、800×600、1024×768) YUV/50Hz (576P、720P、1080I) YUV/60Hz (480I、480P、720P、1080I)	

3. Factory/Service OSD Menu and Adjustment

3.1 To enter the Factory OSD Menu

a. With factory RC (remote control)

1. Press “M” button and enter factory mode.
2. Press “Menu” button and enter factory OSD menu.
3. Press “CH+”/“CH-” button select the function menu, press “VOL+”/“VOL-” enter the selected function menu. Press “VOL+”/“VOL-” button adjust values in the menu.
4. Press “M” button exit factory mode in the factory OSD menu.

When TV outgoing factory, user can not enter factory OSD menu with Factory Remote

b. With user’s RC

1. Power TV On
2. Press Menu button and call up User OSD Menu
3. Select Sound-> Balance
4. When Balance value is “0”, Enter 1->9->6 ->9 in sequence.
Note: If necessary, re-do number keys.
5. Factory OSD appears.
6. Press the standby button then AC turn off and restart the TV, which can exit factory OSD menu.

3.2 Factory OSD Menu

The Factory OSD Menu comprises Factory Menu and Design Menu .

4. Software Upgrading

The software is upgraded by a burning tool-MtkTool, which can burn the program file *.bin to the main board of the unit.

MTKTool2.48.01+PL-2303 Driver Installer.rar

4.1 Get ready for upgrading

4.1.1 Install the driver

PL-2303 Driver
Installer.exe

Double click the icon , install the driver.

Select the default value, the driver will be installed step by step.

4.1.2 Hardware connecting

Connect the unit to your pc with a USB-to-serial port cable. USB port connects to your pc, and serial port to the TV's RS232 port.

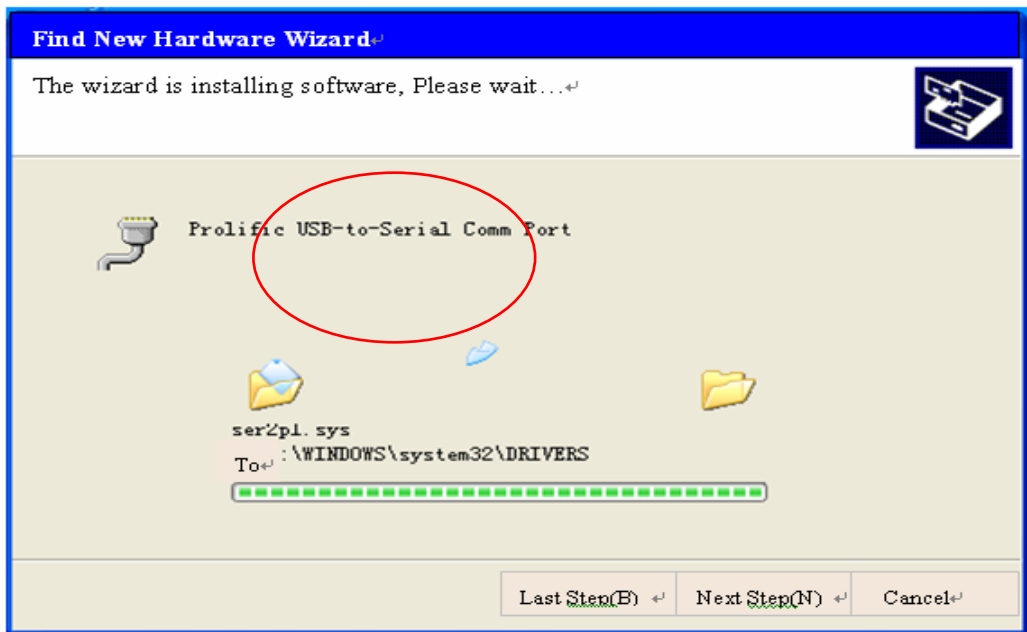

LCD TV Service Manual

USB connector: to PC.

Serial connector: to the main board of TV

For the first connecting, the pc will recognize and automatically install the USB device. The process is just like the installation of a mini disk, see the following picture.

Hisense Confidential

4.2 Upgrading with the MtkTool

MTKtool is a green program needing no installation. It is saved in the folder

. There are five folders/files in this folder altogether.

The MtkTool using log is restored in the MtkLog folder. It records the running time and date whenever the tool is used. The log will be a txt file named by the date and time.

LCD TV Service Manual

MtkTool.exe

After connecting the TV with your PC, double click  icon, open the MtkTool.

If following error appears, it means the related port is not be set properly.

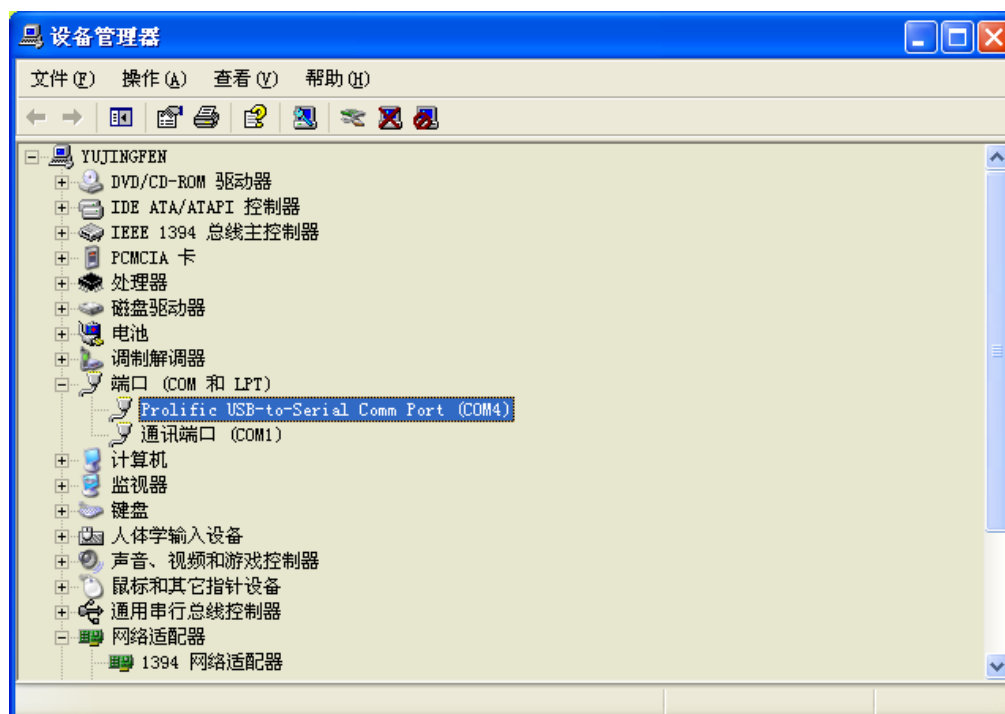

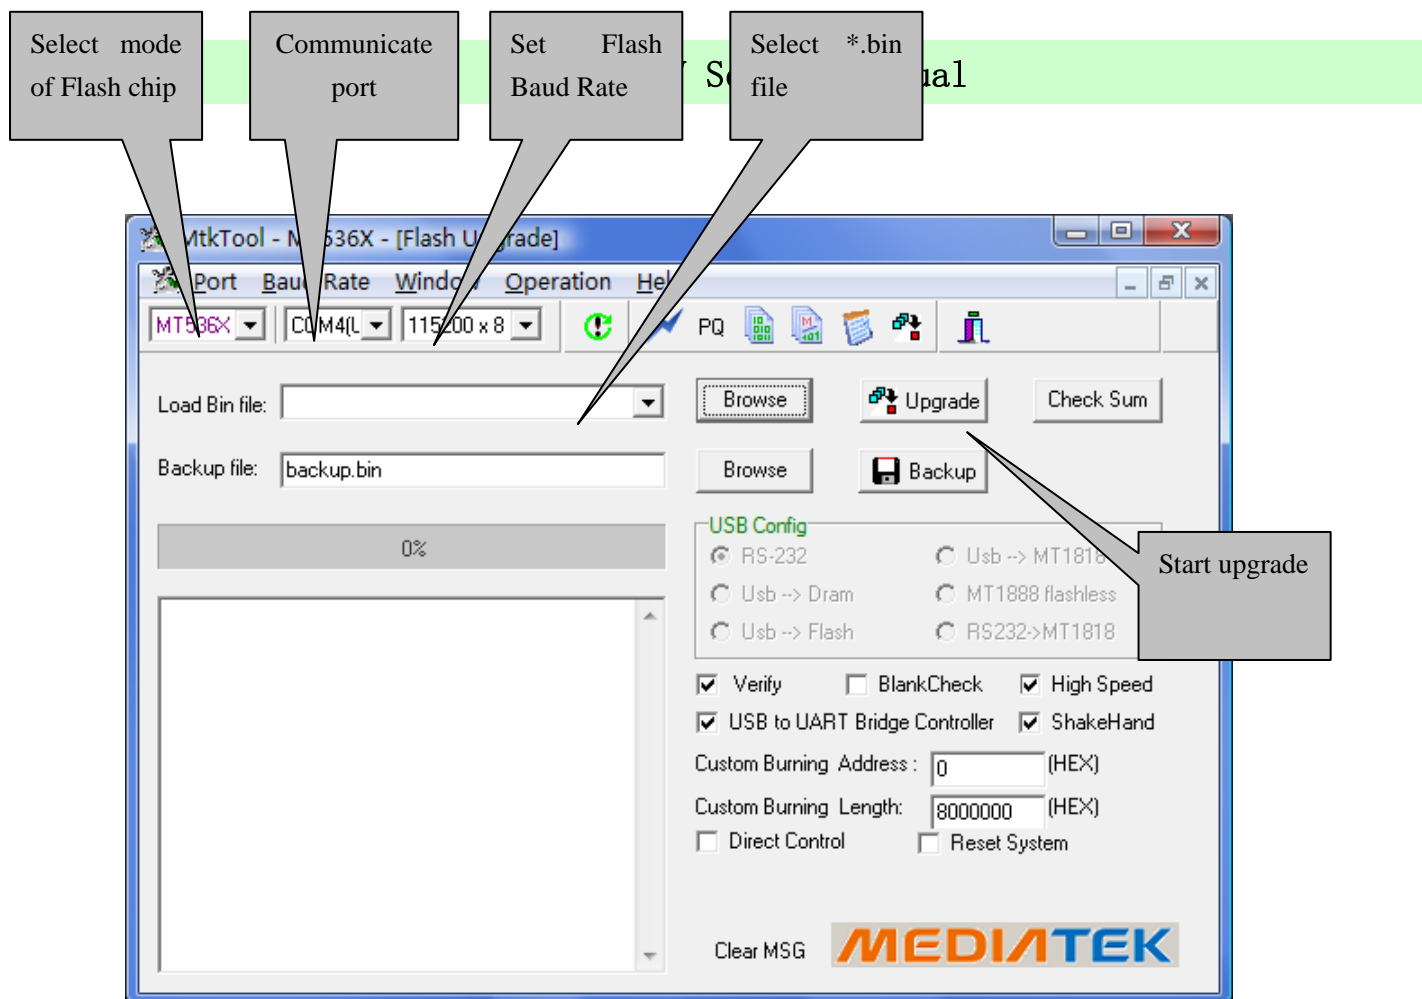

Ignore these errors, click “Confirm” and enter the MtkTool main interface, see the following picture.

Flash chip model

Please refer to follow steps to update the software:

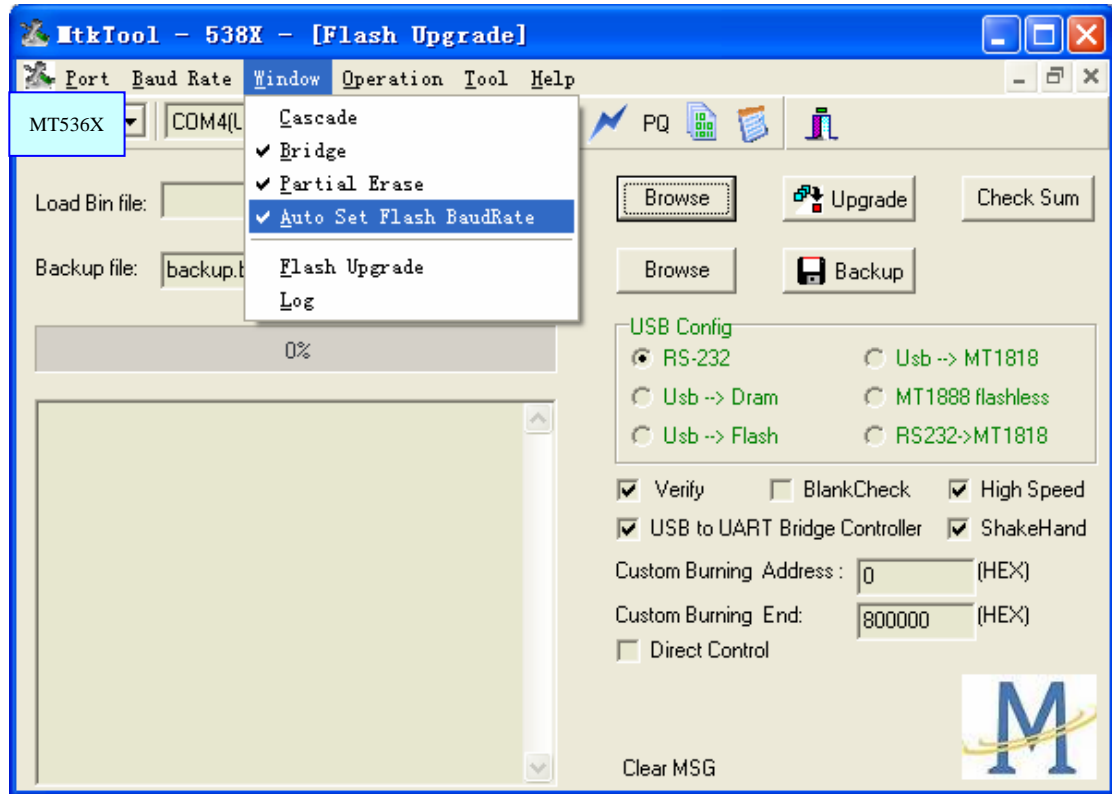

- 1—Select mode of Flash chip to **MT536X** as the below picture.
- 2—Refer to the next page instruction to select the communicate port.
- 3—Press the icon beside the baud rate and make sure it is green as the below picture.
- 4—Set the flash baud rate to 115200 as the below picture.
- 5—Click the browse button to select the *.bin file that will be updated.
- 6—Click the “start” button to update software.

Open “Device Manager” and find which port is connected with the TV. In above picture, COM4 is connected to the TV; so, select “COM4” in the MtkTool main interface. Select the right baud rate according to chip model. For this unit(chip model is MT536X), select 115200.*8. “Auto Set Flash

BaudRate”

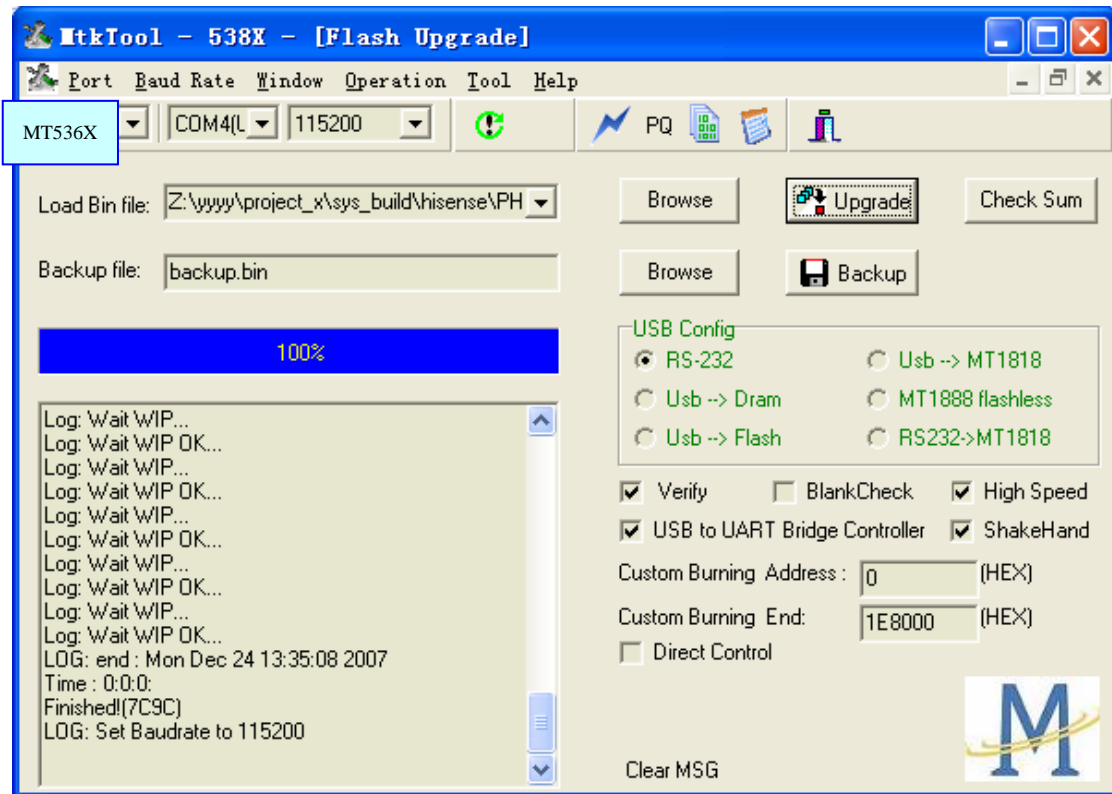

Note: Where or not click the “Auto Set Flash Baud Rate” in the “window” menu depends on the chip type. If the flash chip does not support high speed transport, do not select this option; otherwise, reserve the selected mood.

Click “Browse” button, find the upgrading program file, and select it. Press “Upgrade” button and start upgrading.

The following interface appears on the screen, indicating upgrading successfully.

LCD TV Service Manual

4.3 Upgrading with the USB

MT5303C Series can update with USB directly, the Main software should named his_upgrade.pkg. Turn on the TV then Insert the USB .

The following appear:

Choose “YES” on the screen and press the ‘OK’ button on the remote control, Starting upgrade About 40 seconds.

After Upgrading, the following appear:

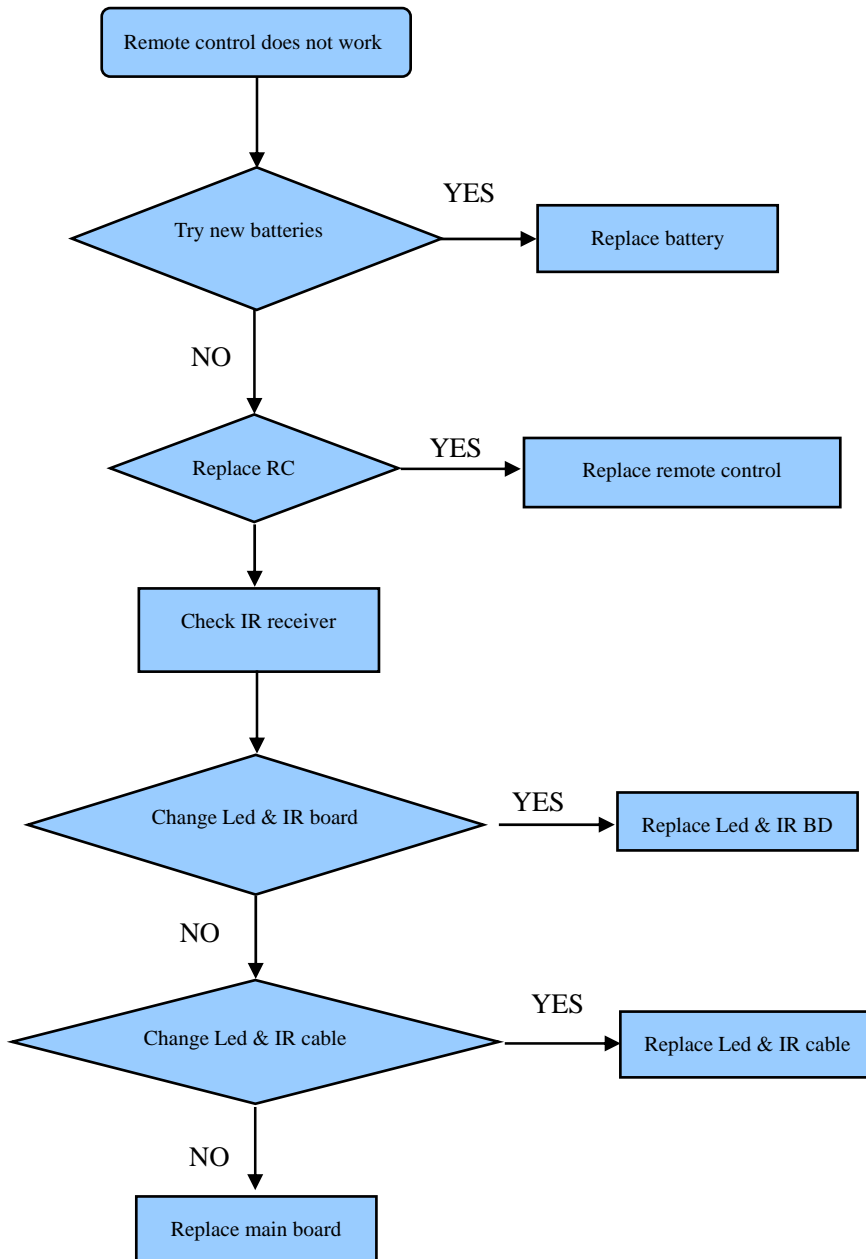

Power off the TV and pull out the USB then restart the TV. The new software start working.

If software upgrading defeated, First turn off the TV.insert the USB and restart the TV.

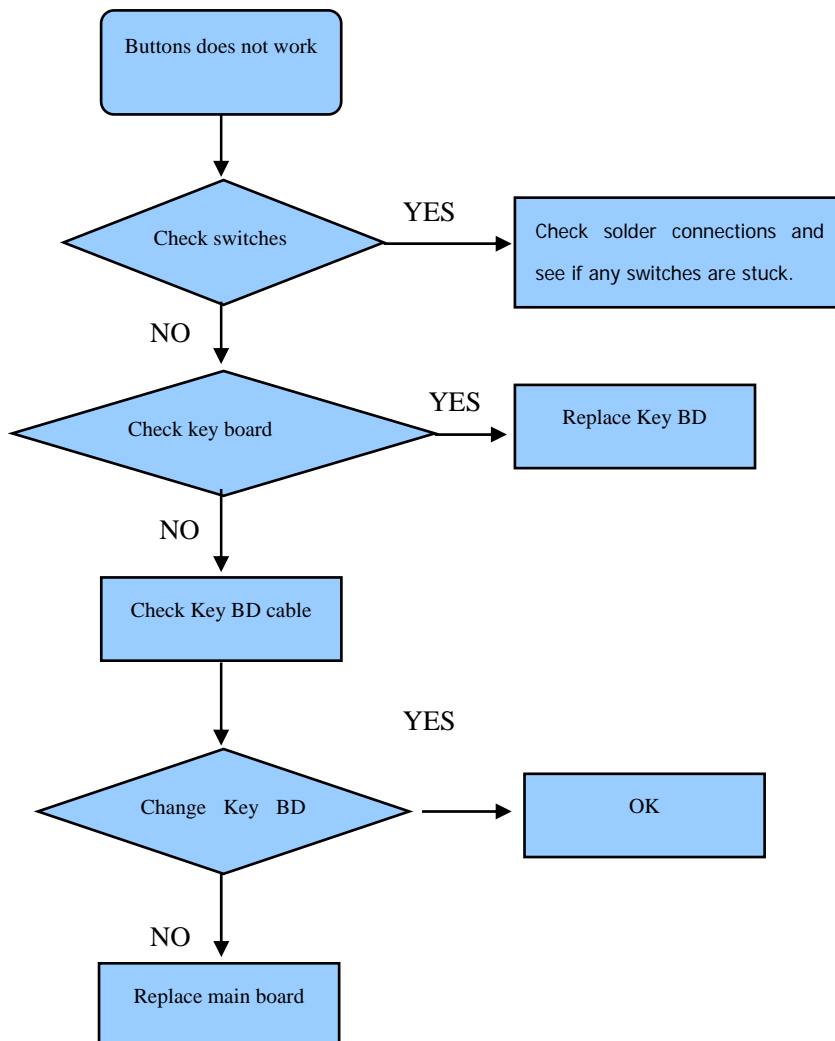

It can automatic upgrade. nothing on the screen ,The indicator led is red. When upgrading is successful ,the indicator led turns blue. The system auto start up.

6. Explode View and Explode Bom List

7. Schematic circuit diagram

The schematic diagram illustrates the M1V0 receiver circuit. It shows the connection between the Near Tuner, the M1V0 chip, and the Near IC. The Near Tuner provides IF AGC2, TUNER_CLK2, and TUNER_DATA2 signals. The M1V0 has pins for IF AGC1, TUNER_CLK, TUNER_DATA, and Tuner_5V. The Near IC provides a +5V_TUNER supply. Key components include capacitors C91 (47nF), C128 (47pF), C60 (47pF), CE50 (100uF/10V), and CE47 (100uF/10V), and resistors R91 (10K), R179 (220.2), R180 (220.2), R215 (4.7K), and R216 (4.7K). The M1V0 is connected to two R-RESC1005L-HX components and two R-CAPC1005L-HX components.

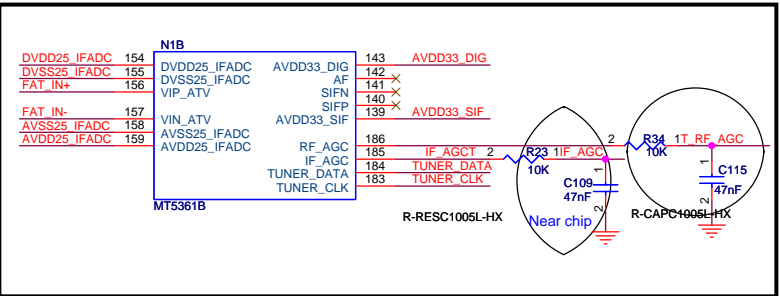

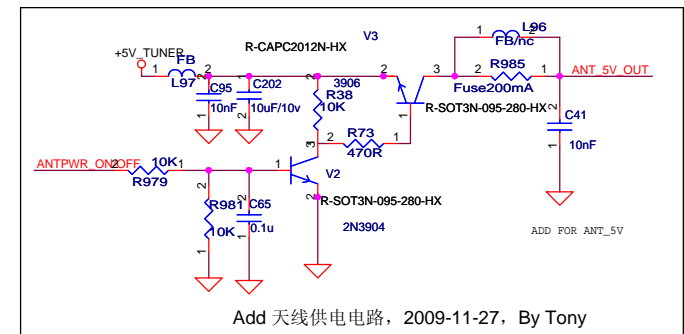

Figure 1 shows four recommended PCB layout diagrams for the R-INDC1608N-HX component, each labeled "NEAR IC".

- Top Left:** Input AV25. The signal line (L26) connects to pin 1. Pin 2 is connected to AVDD25_IFADC. A feedback capacitor (FB) is connected between pins 1 and 2. A decoupling capacitor C354 (4.7uF/10V) is connected between AVSS25_IFADC and ground. A 0.1uF capacitor (C53) is connected between AVDD25_IFADC and ground.
- Top Right:** Input AV27. The signal line (L27) connects to pin 1. Pin 2 is connected to DVDD25_IFADC. A feedback capacitor (FB) is connected between pins 1 and 2. A decoupling capacitor C334 (4.7uF/10V) is connected between DVSS25_IFADC and ground. A 0.1uF capacitor (C87) is connected between DVDD25_IFADC and ground.
- Bottom Left:** Input AV33. The signal line (L34) connects to pin 1. Pin 2 is connected to AVDD33_DIG. A feedback capacitor (FB) is connected between pins 1 and 2. A decoupling capacitor C68 (0.1uF) is connected between AVSS33_DIG and ground.
- Bottom Right:** Input AV33. The signal line (L82) connects to pin 1. Pin 2 is connected to AVDD33_SIF. A feedback capacitor (FB) is connected between pins 1 and 2. A decoupling capacitor C131 (0.1uF) is connected between AVSS33_SIF and ground.

In all diagrams, the R-INDC1608N-HX component is represented by a lens-like symbol, and the R-CAPC1005L-HX component is represented by a rectangle. Ground symbols are shown at the bottom of each diagram.

增加CEC电路, 2009-06-01, By Tony

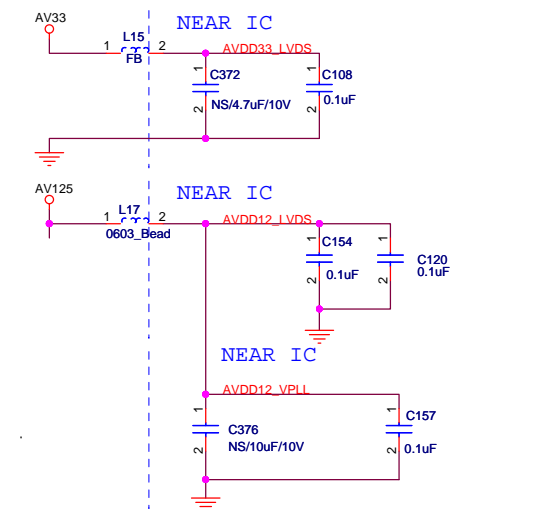

起2个作用:
1、 HDMI CE(enable和Source的时候, 切断S2121的供电, 以防止屏幕上出现某些暂态的画面异常.
2、 HDMI的连接一般有两种接于方式, 最常见的是: 3.3V然后, 看HDMI的是否由低到高的变化, 另外某些HDMI Device, 是以检测HDMI信号上3.3V终端电压的变化来, 判断连接OK, 是否读取eSdID等信息.然后该信号出来. (如Malata 某些型号DVD)
为了兼容以上2种, 我们对Switch的供电采用GPIO控制方式.

INVERTER POWER

The schematic illustrates the inverter power stage of the LED driver. Key components and connections include:

- Power Supply:** +5V and DV33 pins are connected to the top rail.
- Resistors:**
 - R213, R214, R210, R209, R208, R212, R241, R251, R252, R236, R359.
- Capacitors:** C269 (1uF), C358 (10uF/16V).
- Transistors:** V17 (2N3904), V27 (2N3904), V18 (2N3904/nc).
- Resistor Networks:** R-RESC1005L-HX, R-SOT3N-095-280-HX, R-CAPC1608N-HX.
- Control Signals:** OPWM1, GPIO_3, BL_ON/OFF.
- Other Labels:** NS/O, DIMMING, BRT OUT, HI => POWER_OFF, LO => POWER_ON.
